Innovative Automation Engineer with a strong foundation in backend and cloud-native development, specializing in automation using **Python, Go, and Shell scripting**. Proven ability to design and deploy robust, user-centric applications and scalable **microservices** within the **Google Cloud Platform (GCP)** ecosystem. Skilled in automating CI/CD pipelines, managing cloud infrastructure, and improving deployment efficiency through Infrastructure as Code and container orchestration. Committed to enhancing system reliability, performance, and delivery speed through modern DevOps practices.

WORK EXPERIENCE

Automation Engineer

Fournine Cloud Solutions | Hyderabad, India

Aug 2021 - Present

Projects

1. SSL Certificate Orchestration Tool

Designed and implemented an automated SSL certificate management tool that streamlines certificate renewals across Load Balancers, Kubernetes Secrets, and VMs. This solution significantly reduced manual intervention and improved deployment reliability.

Technologies: Python, Go, Jenkins, Docker, K8s Microservice, Bitbucket, Atlassian Jira, Gin, Warlock

2. Automated Jira Ticket Creation from Icinga Alerts

Developed a system to automatically generate Jira problem tickets from Icinga monitoring alerts, enabling faster issue tracking and resolution for the SRE team. This integration enhanced operational efficiency and ensured quicker response times.

Technologies: Python, Icinga, Rundeck, PagerDuty, Atlassian Jira

3. Release Automation

Built a release automation framework to handle quarterly production deployments efficiently. The solution enabled reliable and repeatable deployments, reducing human errors and accelerating release cycles.

Technologies: Jenkins, Shell Scripting, Python, Git, Docker

4. JOVI (Job Visualization)

Created a real-time Jenkins pipeline monitoring tool that tracks job failures, identifies the root cause (e.g., bad commits), and maps them to specific users and repositories. JOVI dramatically reduced debugging time and improved CI/CD transparency for developers.

Technologies: Python, Django, HTML, CSS, Bootstrap, JavaScript, jQuery, Ajax

Data Sources: Jenkins, Bitbucket (live integrations)

5. GCP VM & Serverless Application Deployment

Provisioned and deployed multiple cloud-native applications using GCP services, including virtual machines, serverless platforms (Cloud Run), and load balancers. Additionally utilized GCS buckets for static hosting and backend integration to ensure scalability and reliability of deployments.

Technologies: Google Cloud Platform (VMs, Cloud Run, Load Balancer, GCS), Docker, Jenkins

6. KSP Dashboard - Production Device Monitoring

Built a web-based dashboard to visualize real-time and historical device data from production systems. The tool provides insights in both tabular and graphical formats, aiding stakeholders in data-driven decision-making.

Technologies: Python, Django, MySQL, HTML, CSS, Bootstrap, JavaScript, jQuery, Ajax

7. Wiki Automation for Confluence

Automated the generation and publishing of daily reports and documentation to Confluence, reducing manual effort and ensuring consistent updates across teams.

Technologies: Python, Jenkins, Docker, Bitbucket, Atlassian Confluence

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

Seth Vishambhar Nath Group of Educational Institutions, Lucknow, Uttar Pradesh **(2021 - 2024)**

Diploma in Computer Science

Government Polytechnic, Changipur Noorpur, Bijnor, Uttar Pradesh **(2016 - 2019)**

SKILLS

Languages & Frameworks: Python, Golang, JavaScript, Django

Development: RESTful API, Error Handling, Testing

DevOps & Cloud: Docker, Kubernetes, CI/CD, GCP, Prometheus, Grafana, Icinga, Rundeck, Terraform, Git

Other: Linux, Bash, Scripting, Automation, Logging and Monitoring

Certification

- Associate GCP Cloud Engineer Certification (Expires on Oct, 2027)
